

## DESCRIPTION

The AMS1117 is a positive low voltage dropout regulator; typical voltage dropout is only 1.2V at 1A.

AMS1117 provides two versions: fixed and adjustable versions. VOUT has a tolerance of less than 1.5% for fixed versions 1.2V, 1.5V, 1.8V, 2.5V, 3.3V, 5.0V and adjustable version or 2% output accuracy for fixed version 1.2V.

The AMS1117 offers some key features include thermal shutdown and current limiting. It is suitable for all electronic products.

## FEATURES

- ♦ 1.5% output accuracy for fixed versions 1.2V, 1.5V, 1.8V, 2.5V, 3.3V, 5.0V and adjustable version
- ♦ Adjustable output voltage
- ♦ Low Dropout Voltage: Typical 1.2V@1A
- ♦ Current Limiting
- ♦ Thermal Shutdown
- ♦ Temperature Range: -40°C to 125°C

## APPLICATIONS

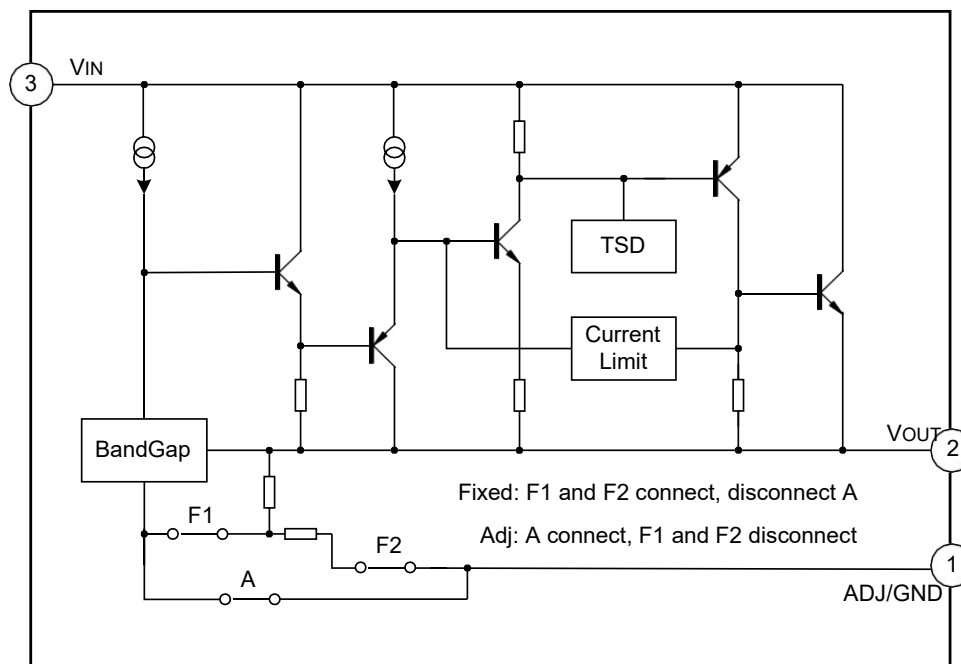

- ♦ Laptop, Palmtop, and Notebook Computers
- ♦ Battery Charger
- ♦ SCSI-II Active Terminator
- ♦ Cellular Phone
- ♦ Cordless Telephones
- ♦ Battery Powered Systems
- ♦ Portable Instrumentation
- ♦ SMPS Post-Regulator

## NOMENCLATURE

## BLOCK DIAGRAM

## 1A LDO Voltage Regulator

## ABSOLUTE MAXIMUM RATINGS

Characteristics		Symbol	Rating	Unit
Input Supply Voltage		$V_{IN}$	18	V
Lead Temperature (Soldering, 5 seconds)		$T_{Lead}$	260	°C
Operating Junction Temperature Range		$T_J$	150	°C
Storage Temperature Range		$T_{stg}$	-65 ~ +150	V
Power Dissipation		$P_D$	Internally Limited (Note1)	
Thermal Resistance from Junction to Ambient	SOT-223-3L	$R_{ja}$	88	°C/W
	TO-252-2L		86	
	SOT-89-3L		102	
ESD Tolerance (Minimum)		ESD	2000	V

**Note1:** The maximum allowable power dissipation is a function of maximum operating junction temperature,  $T_J$  (max), the junction to ambient thermal resistance,  $R_{ja}$ , and the ambient temperature  $T_{amb}$ . The maximum allowable power dissipation at any ambient temperature is given:  $P_{D(max)} = (T_J(max) - T_{amb}) / R_{ja}$ , exceeding the maximum allowable power limit will result in excessive die temperature; thus, the regulator will go into thermal shutdown. The junction to ambient thermal resistance,  $\theta_{JA}$  of some packages may be different, The value of  $\theta_{JA}$  depends on mounting technique.

## RECOMMENDED OPERATING CONDITIONS

Characteristics	Symbol	Rating	Unit
Input voltage	$V_{IN}$	12	V
Operating Junction Temperature Range	$T_J$	-40 ~ +125	°C

### PIN CONFIGURATION

### PIN DESCRIPTION

Pin No.	Pin name	I/O	Functions
1	GND/ADJ	--/O	Ground/ADJ
2	V <sub>OUT</sub>	O	Output voltage
3	V <sub>IN</sub>	I	Input supply voltage

### FUNCTION DESCRIPTION

The AMS1117 is a LDO regulator, its pass transistor is made up of a single NPN transistor being driven by a PNP.

The dropout voltage is defined as:  $V_{DROP} = V_{BE} + V_{SAT}$ .

The AMS1117 series of fixed and adjustable regulators are easy to use. Output voltages are 1.2V, 1.5V, 1.8V, 2.5V, 3.3V, and 5.0V. On-chip thermal shut down provides protection against any combination of overload and ambient temperature that would create excessive junction temperature.

The AMS1117 requires an output capacitor for device stability. Its value of 22μF tantalum covers all cases of bypassing the adjustment terminal. Without bypassing the adjustment terminal smaller capacitors can be used with equally good results which depend upon the application circuit. In general, linear regulator stability decreases with higher output currents.
